

FOLDING YOUR POOL COVER

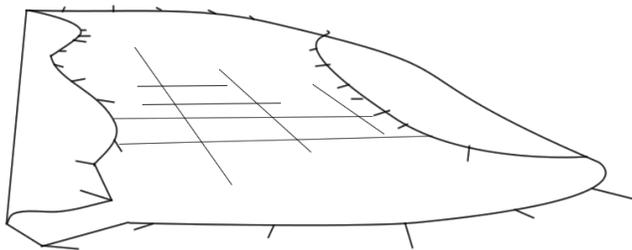

Step 1:

Lay your pool cover out on a flat surface and clean off any debris, leaves or dirt

Step 2:

Remove any metal hardware like springs or hooks.

Step 3:

Fold over the long edges on each side of your cover to create a rough rectangle.

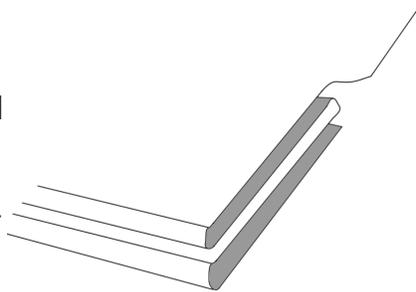

Step 4:

Start at one end of your cover and fold it in a "Z" fold.

- Grip the edge of the cover or a cover strap and carefully pull each side.

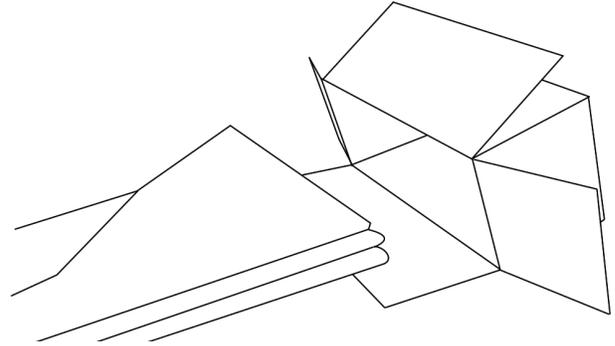

- To keep your folds even, you can fold along the width of your cover panels.

- As you make each "Z" fold, check the cover and press out any pockets of air so the cover folds flat. This will ensure your cover will fit neatly into your Meyco return shipping box.

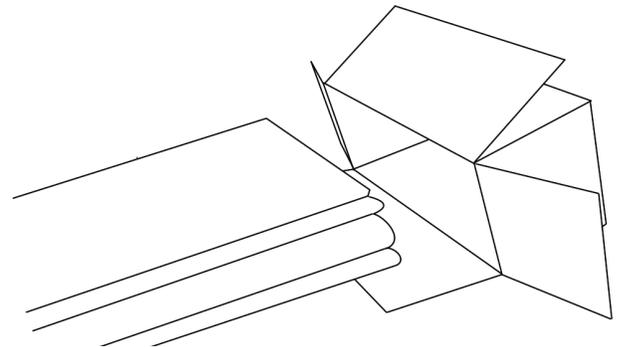

Step 5:

Once you've completed your "Z" folds, tip your Meyco shipping container on its side (lay it flat along the long side – not the short end) and carefully slide the narrow end of the cover into the box.

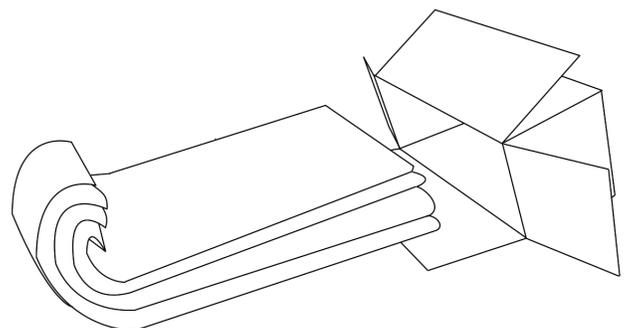

Step 6:

Fold the cover over one or two times. Press out any large air pockets that may be between the folds and slide any loose straps between the folds

Step 7:

Roll the cover up, keeping the rolls as tight as possible.

Step 8:

Roll the cover into the box and stand the box upright. Use packing tape to seal the box along each edge and you're all done!
